

Is Your Organization Ready for MEDITECH Advanced Clinicals?

VCS can Help.

The **VCS infrastructure Readiness Assessment (RA)** is designed to provide a high-level evaluation of your clinical application. VCS RA will measure an organization's ability to adapt to and sustain change in the clinical arena. Our Readiness Assessment focuses on two major areas of an organizational readiness: operational and cultural. VCS has developed a series of best practices, gathered through extensive research and experience working with healthcare organizations like yours. Our RA outlines key methods and processes, as well as, several subtopics pivotal to a healthy communications environment that yield highly successful results.

VCS has a three phased methodology for the Readiness Assessment:

- The consulting assessment team organizes the project activities during the Initiation Phase and begins the collection of data using an organizational specific data inventory tool. The consulting team is also granted access to the Test HCIS to begin the operational aspect of the RA.
- The next phase is Discovery and Assimilation which is conducted on-site and focused on detailed analysis of existing system infrastructure and internal processes. Areas of focus include Executive, Administrative, Patient Access, Clinical, Ancillary and Financial.
- The final phase of the RA is Report Preparation, Review and Submission. A report of findings is created and a complete draft of the report is submitted in an electronic format for review and discussion with the client prior to final delivery.

MEDITECH is the premier vendor of integrated systems for community hospitals and those on the verge of significant change. Vitalize Consulting Solutions, Inc. (VCS) has experience working in both the Magic and the Client Server environments. We are well positioned to help hospitals optimize their current environment or migrate to the new platform focused on your critical objectives.

At VCS we understand the unique nature of the MEDITECH environment where hospitals are being asked to deliver a broader menu of complex services and interact with complimentary organizations all within the constraints of tighter budgets.

- Implementation and Optimizations
- Project Management
- PMO Services
- Conversion Services
- Technology Assessment and Planning
- Readiness Assessment

Our in-depth knowledge of the MEDITECH applications within the context of the broader technology environment give VCS an advantage as your hospital moves toward higher levels of interaction and performance.

Experience VCS. IT's what differentiates us.

MEDITECH Practice

Summary of Skills

- Magic to Client Server Migration
- Technology Assessment and Planning
- NPR Report Writing
- Data Extract Services
- Interface Services
- Upgrade Management
- Project Management

“Engaging VCS for a facility-wide Readiness Assessment before our

Children’s Hospital
Central California 

migration from Magic to Client Server made the project a huge success. VCS has extensive knowledge and expertise with MEDITECH’s Advanced Clinicals, as well as the ability to see the “big picture” during a large implementation. Not only was VCS able to assess CHCC’s overall readiness for the migration, they were able to recommend enhancements that provided immediate benefit for the facility. I can’t imagine all the time and money they saved us in the end.”
