

## **Vitalize Partners with Sentillion to Bring IDM Expertise to Hospitals**

Kennett Square, PA– May 10, 2007 – Sentillion, Inc has partnered with Vitalize Consulting Solutions, Inc (VCS) for the benefit of Sentillion’s Identity Management clients. This partnership will enable Vitalize to provide experienced consultants offering system assessment, selection, procurement, planning and implementation services as a Sentillion Service Partner.

VCS Identity Management (IDM) is used to define the set of products and workflows that allow for improved creation and management of accounts and access rights across a defined set of applications and computing resources within an organization. These programs generally include single sign-on, password management, user provisioning, privacy protection, auditing and reporting, and context management.

Sentillion Service Partners are organizations that provide implementation services and support for business processes within the IT environment. Partners also assist healthcare organizations to leverage their technology investments by providing expertise, guidance and implementation of business processes and best practices. As one of Sentillion’s Service Partners, Vitalize offers three implementation phases to aid hospitals with their IDM software.

- Phase 1—IDM Strategy, assessment and analysis to develop plan and goals
- Phase 2—Evaluation, Selection, Procurement, and Planning, to support the strategy
- Phase 3—Implementation, to execute the plans and to evaluate the success.

Sentillion’s Identity Management systems are designed to enable faster, safer, and more efficient access to patient information. In order to maximize the benefits the VCS partnership was developed to bring more value and expertise to the client.

### **About Sentillion, Inc.**

Sentillion enables organizations of all sizes, from enterprises to small and medium businesses, to deliver and meet the challenges associated with access management, safety and privacy, regulatory compliance and protection of data and information sources – both inside and outside the enterprise. Its flagship product, Vergence™, built specifically for the healthcare industry, is an open, flexible and standards-based solution that includes user provisioning, strong authentication, single sign-on, clinical context management and privacy management. Sentillion’s vThere™ solution is the first virtualized, server-less remote access solution for organizations in any industry. Sentillion is ranked by KLAS®, the healthcare industry’s leading research firm, and has been named by IDC Research as the leading vendor for healthcare single sign-on for four consecutive years. Sentillion is a privately held company headquartered in Andover, Mass. For more information, visit Sentillion at [www.sentillion.com](http://www.sentillion.com).
